SUMMARY

Software Engineer and AI Master's student at Cnam, Paris, seeking a challenging role in Software Engineering or AI. Strong background in Full-Stack Development, LLMs, and scalable architecture.

WORK EXPERIENCE

Software Engineer, Sybrid IT Solution (remote) Dec 2024 - August 2025

- Built and deployed full-stack applications using Next.js, React, React Native, and Node.js with SQL, Firebase, and MongoDB backends.
- Delivered production releases on schedule within cross-functional teams; contributed to architecture discussions for AI/ML data integration.

Software Engineer Intern, Student Startup Business Center (SSBC) June 2024 - Aug 2024

- Developed scalable web apps using Node.js, Express.js, React.js, and MongoDB; built RESTful APIs and reusable front-end components.

EDUCATION

Master of Artificial Intelligence for Connected Industries 2025 - present

Conservatoire National des Arts et Métiers (Cnam), Paris

Bachelor of Science in Computer Science 2021 - 2025

COMSATS University Islamabad

ACHIEVEMENTS

- **1st Position, Final Year Project (FYP):** Awarded 1st place at the COMSATS Career Expo 2024 for the "Campus Sports Sphere" capstone project.

PROJECTS

Campus Sports Sphere — AI-Driven Sports Management System [Source](#)

- Built a React Native/Node.js platform with an intelligent recommendation engine for sports reservations using weather and user data.
- Developed a TensorFlow.js module for image recognition and skill-based team formations with automated match scheduling.
- Integrated a custom AI Chatbot for instant, contextual support for complex queries.

RecoverCare — AI-Powered Health Platform [Source](#)

- Engineered a privacy-first monitoring system with local NLP for automated sentiment analysis and smart patient triage.
- Developed an AI Recovery Predictor using ML regression on time-series vitals to forecast healing and detect anomalies.
- Architected an API-free, Dockerized Node.js/PostgreSQL backend to execute ML models locally for 100% data sovereignty.

DocuForge — Offline AI Formatting Engine [Source](#)

- Built an offline AI formatting engine with FastAPI, python-docx, and spaCy to standardize text into publication-ready documents.
- Applied NLP with zero external API dependencies for enhanced reliability and privacy.

QuickBite — AI-Powered Food Delivery Application

Source

- Engineered an on-device AI engine with Semantic NLP Search (TF-IDF) and Content-Based Recommendations (Jaccard Similarity).
- Developed a Dynamic Prep-Time Predictor (Linear Regression) and Smart Cart Cross-Selling (Apriori algorithm).
- Built a React Native frontend with a simulated on-device TFLite computer vision pipeline for zero-latency, private AI processing.

Security Research: DNS Cache Poisoning Attack

Cnam, Paris

- Analyzed Linux kernel side-channel vulnerabilities in ICMP error processing that bypass Source Port Randomization.
- Proposed a "0x20 + TCP Hybrid Defense" using randomized capitalization to neutralize cache poisoning without disrupting Path MTU.
- Extended defense with ML models for real-time anomaly detection of complex side-channel attacks.

Tourism Project — Data Structure and Algorithm

Source

- Engineered a C++ travel routing engine using Dijkstra’s Algorithm on directed graph adjacency matrices for optimal pathfinding.
- Built a custom File I/O engine to serialize and reconstruct complex, nested pointer-based linked lists.
- Implemented rigorous memory management with raw pointers and FIFO queues for zero-leak garbage collection.

Bankee — Modern Mobile Banking App

Source

- Built a React Native/Expo app with Firebase Auth and Firestore for secure, real-time data synchronization.
- Implemented workflows for secure P2P transfers, transaction history, subscriptions, and push notifications.

Java Enterprise Applications — College & Hotel Management Systems

Source

- Engineered object-oriented Java applications (GUI and Console) featuring role-based access control, resource allocation (courses/rooms), and robust file I/O data persistence.

SKILLS

AI & ML:	Machine Learning, Deep Learning, Neural Networks, Scikit-Learn, XGBoost, TensorFlow.js, NLP (spaCy, TF-IDF), Recommender Systems, LLMs, Federated Learning (Flower), Pandas
Architecture:	Data Structures & Algorithms, On-Device ML, Memory Management, REST/FastAPI, PostgreSQL, MongoDB
Languages:	Python, C++, TypeScript, JavaScript, Java, C, SQL, Bash
Full-Stack:	React.js, Next.js, React Native, Expo, Node.js, Express.js, Flask, Firebase, Tailwind CSS
DevOps & Tools:	Docker, Kubernetes, AWS, Git, Linux Environments

CERTIFICATIONS

Intermediate Machine Learning

Kaggle

- Optimized ML workflows using Scikit-Learn, XGBoost, Scikit-Learn Pipelines, and advanced data preprocessing.

Intro to Machine Learning

Kaggle

- Developed predictive models utilizing Scikit-Learn, Pandas, EDA, Decision Trees, and Random Forest Regressors.
